# SAVE EVEN MORE ON THESE BRAND NEW 16mm. SOUND FEATURE PRINTS

The bulk of the prints contained in our purchase of the inventory of Pictorial Films, Inc., last May have now been sold. For the most part only a print or two remains on hand of each of the titles listed below. To speed up the close-out of this remaining stock, we're marking them down even more, and when you look at these LOW prices, just remember that these are brand new, first quality prints, on new 1600' reels, and that the prices are postpaid in the USA if you remit in full with your order. Most westerns are about 2100' in length, while non-western features run 2400' to 3000'.

# ● USED 16mm. SOUND FILMS ●

For the last four years this Blackhawk list of used 16mm. sound prints has been pounced on by collectors faster than you can say: "Send me that one!" We used to disappoint many more persons than ever got the prints they ordered. However, in the past year, a controlled system of listing has upped tremendously our ability to supply what is listed, and your chances of getting what you order in used prints is reasonably good — if you order soon after the list reaches you. However, please remember that we usually have only a few of a title — sometimes only one! This means that two or three weeks after our mailing of this catalog, more and more of these titles will have been sold. Keep this in mind when you order. Order early, and, in justice to yourself, give us as many alternate titles as you can. We never send an alternate unless your top choices are out of stock — and we do not substitute!

The approximate footage of each film is listed in parenthesis immediately after the title. Remember, this is approximate only. And remember, too, that footage indicators embossed on reel spokes are not completely accurate. Different makes show variations of 25' to 50' in the same print, sometimes even more in the case of 1600' capacity reels. Subjects of 50' and 100' lengths are normally delivered on 100' reels, but some trailers are delivered off reels. Films over 100' in length, but not longer than 400', are usually on 400' capacity reels. Films from 400' to 800' normally come on 800' capacity reels — but sometimes those running 400' to 600' will be shipped on a 600' reel. Subjects of 800' to 1600' usually are on 1600' reels, while all feature pictures are assembled on two 1600' reels, with the longer features on three 1600' reels.
