What Is the QuickBooks Refresher Tool?

The old standalone tool is retired. Its official replacement is Quick Fix my Program.

Then: QuickBooks Refresher Tool

- Standalone .exe file (QBRefresher.exe)
- Ended background QuickBooks processes
- Ran a mini repair of the program
- No longer available from Intuit
- Was the first step for freezes & lag

Now: Quick Fix my Program

- Built into QuickBooks Tool Hub
- Same core actions as the old tool
- Official & recommended by Intuit
- Always use the latest Tool Hub version
- Your new first troubleshooting step

What Does Quick Fix my Program Do?

1

Ends Background Processes

Closes any QuickBooks-related processes (QBW32.exe, QBW.exe, etc.) that may still be running after you close the program.

2

Runs a Mini Repair

Performs a quick repair of the QuickBooks Desktop installation itself — without touching your company file or financial data.

No company file changes

Safe for your data

Usually < 2 minutes

Fast first step

Official Intuit tool

When Should You Run It?

Use Quick Fix my Program as soon as you notice these symptoms:

Freezes or becomes unresponsive

Program locks up and won't respond to clicks

Doesn't close properly

Window closes but processes stay in Task Manager

Unexpected behavior

Odd errors or crashes during normal use

Runs slowly or lags

Noticeable delay while working in QuickBooks

Background processes remain

QBW32.exe / QBW.exe still running after exit

After updates or Windows changes

Problems appear right after an update

Full list of symptoms & solutions → [QuickBooks Desktop freezes](#)

How to Run Quick Fix my Program (7 Steps)

1

Close QuickBooks completely

End any remaining QBW32.exe / QBW.exe in Task Manager if needed.

2

Download latest Tool Hub

Get version 1.6.0.8 (or newer) from Intuit's official support page.

3

Install Tool Hub

Run QuickBooksToolHub.exe and accept the license agreement.

4

Open QuickBooks Tool Hub

Use the desktop icon or search in the Start menu.

5

Select Program Problems

Click Program Problems in the left menu of Tool Hub.

6

Click Quick Fix my Program

Wait while it ends processes and runs the mini repair.

7

Reopen QuickBooks

Launch Desktop and open your company file to test.

Tip: Always use the latest Tool Hub. Detailed screenshots → [run Quick Fix my Program](#)

Quick Fix my Program vs Old Refresher Tool

Feature	Quick Fix my Program	Old Refresher Tool
Current status	Official & recommended	Retired – no longer available
Location	Tool Hub → Program Problems	Standalone .exe file
Main actions	Ends processes + mini repair	Same
Affects company file	No	No
Recommended first step	Yes	No longer
Download source	Intuit official Tool Hub	No longer provided

They do the same job. Use the modern version → [replace QuickBooks Refresher Tool](#)

If Quick Fix my Program Doesn't Fix It

Move to these next troubleshooting steps in order:

1

Install Diagnostic Tool

Tool Hub → Installation Issues → QuickBooks Install Diagnostic Tool (can take ~20 min).

2

Update QuickBooks Desktop

Install the latest release for your version, then restart the program.

3

Repair the Installation

Use Windows Settings / Control Panel → Apps → QuickBooks → Repair.

4

Company File Issues

If the program opens but a specific file fails → Tool Hub → Company File Issues → Quick Fix my File or File Doctor.

Complete troubleshooting path → [Program Problems in Tool Hub](#)

Frequently Asked Questions

Q: Is Quick Fix my Program the same as the Refresher Tool?

A: Yes in function. Both end background processes and perform a mini repair. Quick Fix is the current official version.

Q: Does it affect my company file?

A: No. It only works on the QuickBooks Desktop program and background processes. Your data stays untouched.

Q: Do I need to close QuickBooks first?

A: Yes. Close all QuickBooks Desktop windows completely before running the tool.

Q: How long does it take?

A: Most runs finish in under one to two minutes.

Q: Can I still download the old Refresher Tool?

A: Intuit no longer provides the standalone QBRefresher.exe. Use Quick Fix my Program instead.

Q: What is the latest Tool Hub version?

A: As of recent updates, 1.6.0.8 is current. Always download from Intuit's official support pages.

Best Practices & Pro Tips

1 Always close QuickBooks first

Ending processes while the program is open can cause more problems.

2 Use the latest Tool Hub

Check the version on the Home tab. Older versions may miss fixes.

3 Run it early

Intuit recommends this as the first step for freezes, lag, and "stopped working" messages.

4 Don't end database server processes

If other users are connected, leave QBDBMgrN.exe running.

5 Test after every step

Reopen QuickBooks after Quick Fix before moving to deeper tools.

6 Keep a clean backup habit

Even though this tool doesn't touch data, good backups are always smart.
