# Understanding Cannabis Yield per Plant - RQS Blog - Royal Queen Seeds

Before getting over-excited about a massive yield, it's important to distinguish between wet and dry. When bud is first harvested from a cannabis plant, it will be full of water, which will account for about 75-80% of its weight. So if you pull in 100 grams straight after harvest, you might find you only have 20-25 grams once you've cured.

## Top 10 High-Yielding Outdoor Cannabis Strains - RQS Blog

Top 10 High-Yielding Strains to Grow Now, on to the 10 best strains to grow. Note that these strains are all photoperiod-dependent, meaning they rely on a reduction in light exposure to move from the vegetative stage to the flowering stage. As such, these cultivars are able to take full advantage of space and sunlight outdoors, bringing in the largest possible yield.
