Propionate needs to be injected more frequently than cypionate, roughly every 2-3 days if used as a monotherapy to keep serum testosterone stable. For this reason and due to its more robust peak (and trough) effect I personally don't favor propionate as a monotherapy, but it does appear to have anecdotal benefit when combined with a longer ester ... Nov 7, 2020. Share. Share. Testo-Cypmax is an injectable steroid which contains 250 mg per ML of the hormone Testosterone Cypionate. Product: Testo-Cypmax 250 mg 1 ml. Category: Injectable Steroids. Ingredient: Testosterone Cypionate. I am therefore looking to start a revised protocol using a blend of prop and enanthate (or cypionate) to smooth out the peaks and valleys. There are number of people on this forum who successfully use low dose daily blends. As I recall, several use a 4:3 enanthate-to-prop blend while others prefer a more prop-heavy blend. Tri-Blend

is a combination of three forms of Testosterone—Testosterone Cypionate, Testosterone Enanthate, and Testosterone Propionate. By combining these three potent Testosterone Oils it is possible to smooth the peaks and valleys of Serum Testosterone associated with each individual treatment in order to provide a more natural ongoing ... <https://aps1.instructure.com/courses/1085/pages/testosterone-undecanoate-1000-mg-test-deca-dbol-winstrol> On this go around, he put me on a Cypionate / Propionate blend. It is 200mg cyp/ 50 mg Prop. (Per ml). His instructions to me are to take .75ml injections twice weekly or .50ml 3x weekly. Either way, this equals 300mg Cypionate/ 75mg Propionate per week = 375mg total per week. My injection schedule will be Mondays and Thursday's (for 2 ...

The most common Test 400 testosterone blend has the more fast-acting Testosterone Cypionate and Testosterone Propionate while the Testosterone Enanthate works rather slowly. The injection works by injecting the testosterone directly into the bloodstream, which helps to boost muscle growth. It also increases appetite and weight. Testosterone Enanthate has a half life of about 7 days. Testosterone Cypionate has a half life of about 6 days. Testosterone Propionate has a half life of about 2-3 days. Sustanon contains a combination of testosterone esters and it's release into the blood stream is much more complex. This is neither an advantage nor disadvantage. I'm thinking of trying Enanthate/ Propionate blend. I tried 25 mg prop about 9 days ago and experience very strong erections and libido on the day and next two days. It increased DHT too much in me. I had oily skin and all that then I became depressed. took another 20 mg after 4 days later and become more depressed. Though these branded blends manufactured by pharmaceuticals companies can be found easily in market, still one can make their own blend by mixing different types of esters. The most common testosterone esters which can be used in a blend are enanthate, cypionate and propionate. <https://johnston.instructure.com/courses/108068/pages/testosteron-injektion-kaufen-testosterone-injection-side-effects-on-males>
